

FARMBRIDGE — FULL PITCH DECK SCRIPT (Slide- by-Slide)

Slide 1 — Title Slide

Title: Farmbridge

Subtitle: Connecting Farmers, Buyers & Agritech Services Through One Unified Marketplace

Extras:

Prepared by: *Branham Kola*

Date: *Dec 2025*

Slide 2 — Problem

- Fragmented agricultural markets create low bargaining power for farmers.
- Price discovery is inconsistent and delayed.
- Post-harvest losses remain high due to poor logistics coordination.

- Buyers struggle with inconsistent supply, traceability, and quality assurance.
- Farmers lack access to quality inputs, financing, agronomy support, and verified buyers.

Slide 3 – The Opportunity

- Over **30 million East African farmers** need structured markets.
- Massive inefficiency in crop aggregation and buyer sourcing.
- Processors/exporters need stable, traceable supply chains.
- High adoption of smartphones + mobile money creates a ripe digital ecosystem.
- No single platform integrates **marketplace + logistics + inputs + extension + finance** the way Farmbridge does.

Slide 4 — Our Solution

Farmbridge is a mobile-first, offline-capable agritech marketplace that unifies:

- Farmers
- Buyers
- Input suppliers
- Logistics providers
- Agronomy agents
- Microfinance partners

It is **fully developed and production-ready** — only the data population and deployment phase remains.

Slide 5 — What Makes Farmbridge Different

- Built as a complete ecosystem, not a single-function app.
- Offline-first architecture for areas with poor connectivity.
- Real-time price discovery & contract management.

- Integrated logistics scheduling + agent workflows.
- End-to-end traceability and digital receipts.
- Designed for scale across East Africa.

Slide 6 — Key Features

- Farmer onboarding, light KYC & farm profiles.
- Marketplace listings, bids, offers, and contract farming.
- Quality grading module for field agents.
- Logistics coordination & dispatch tracking.
- Input shop with verified agro-vendors.
- Agronomy hub with recommendations & chat support.
- Mobile money payments & receipts.
- Enterprise buyer dashboard (web).

Slide 7 — MVP Status (Completed)

- Android app fully built (React Native).
- Web dashboards for buyers and operations teams.
- Offline sync engine implemented.
- Core flows: onboarding → listing → negotiation → logistics → payment.
- SMS gateway integrated.
- Mobile money payments integrated.
- Logistics workflow functional.

What's missing:

- Farmer data population
- Pilot execution
- Field agent onboarding
- Market activation budget

Slide 8 — Architecture Overview

- React Native (Android-first)
- Cloud backend (Node/TypeScript)
- PostgreSQL database
- Offline-first architecture with local

caching

- REST + GraphQL APIs
- Integrated M-Pesa mobile money API
- SMS notifications for farmers without smartphones

Slide 9 — Market Focus

Phase 1 (Kenya):

Maize, vegetables, pulses, potatoes, bananas.

Expansion Regions:

Uganda → Tanzania → Rwanda → Zambia (cooperatives & aggregators).

Why Kenya first:

- Strong mobile money adoption
- High farmer smartphone penetration
- Processor demand is high
- Regulatory environment favourable
